

Biruk Getaneh

Data Engineer

Experienced Data Engineer with expertise in designing and optimizing end-to-end data pipelines, utilizing SQL and Python to analyze complex datasets. Skilled in data modeling, analysis, and building scalable, fault-tolerant solutions that drive actionable insights and improve business decision-making.

Experience

Kifiya Financial Technology

Senior Data Engineer

Dec 2025 – Present

Addis Ababa, Ethiopia

- Engineered the transition from unmanaged S3 Parquet to a governed Apache Iceberg lakehouse and Redshift Datawarehouse utilizing a medallion architecture, defining the core platform standards for a multi-bank partner fintech data ecosystem.
- Designed and engineered an automated Ethiopian location standardization pipeline, normalizing highly fragmented, multi-layer user inputs into official government regional hierarchies to drive accurate business reporting.
- Built robust Apache Airflow pipelines to ingest data from varied sources, staged it in AWS S3, applying complex transformations, managing multi-version storage in Trino, and loading reporting-ready data into Amazon Redshift.

Safaricom Telecommunications Ethiopia

Big Data Analytics Engineer

Sep 2023 – Nov 2026

Addis Ababa, Ethiopia

- Leveraged data from 15 million active Telecom subscribers using advanced analytics to shape targeted marketing and service delivery strategies, ensuring 100% availability of aggregated customer lifecycle data in the managed data warehouse.
- Designed and implemented efficient ETL pipelines, guaranteeing smooth extraction from a data lake, transforming, and loading of data into a data-warehouse, resulting in improved data processing efficiency.
- Utilized Apache Airflow as a workflow manager, Spark (with Scala) for intricate transformations, and Superset and Power BI for reporting and dashboarding, leading to enhanced data processing workflows and improved reporting accuracy.

Adjibar Technologies

Data Engineer, Contract

Feb 2024 – Aug 2025

US, Remote

- Leveraged Google Cloud Platform (GCP) tools such as BigQuery, Dataflow, and Pub/Sub to analyze data, design pipelines, and automate data flows, resulting in a 30% increase in data processing efficiency.
- Developed Composer Airflow DAGs to automate data loading from diverse sources such as SFTP and shared Drive into Google Cloud Storage, merging the data into BigQuery tables.
- Applied complex data transformations in the data warehouse using dbt jobs, ensuring data integrity and quality, which led to more accurate analytics and reporting capabilities.

Exxon Mobil

Data Engineer

Jul 2022 – Jul 2024

US, Remote

- Managed customer relationship management by leveraging Salesforce Marketing Cloud & Snowflake.
- Orchestrated end-to-end data processing, analysis, and implemented automated workflows.
- Re-engineered backend data pipelines in SFMC, seamlessly synchronizing multiple tasks, and validated data integration processes to ensure accuracy and efficiency, resulting in a 25% enhancement of overall computational performance.

- Developed and refined SFMC automation monitoring for real-time tracking of automation statuses, ensuring complete oversight and 100% control over all active automations.
- Executed and managed high-impact email campaigns, and track their effectiveness.
- Pioneered an automated data backup and monitoring system for enhanced data security.

Haramaya University

Assistant Lecturer

Oct 2015 – Sep 2019

Haramaya, Ethiopia

- Four years of IT teaching, fostering interactive learning, guiding students in innovative research projects, advising and evaluating graduating students' practical projects for industry collaboration, leading external training sessions, and showcasing strong organizational skills.

Education

10 Academy, Germany

Certificate in Data Engineering and Machine Learning Engineering

May 2022 – Jul 2022

Online Training

Haramaya University, Ethiopia

Master of Science in Computer Science

Oct 2019 – Oct 2021

Haramaya, Ethiopia

Debre Berhan University, Ethiopia

Bachelor of Science in Information Technology

Nov 2011 – Jul 2015

Debre Berhan, Ethiopia

Projects

Advertisement Data Analysis | Python, SQL, dbt, Airflow, Postgres, Docker, Machine Learning

- Orchestrated data wrangling operations to seamlessly connect data from different stages of the creative creation and Ad placement process, resulting in a unified dataset within the data warehouse.
- Devised and deployed a cutting-edge machine learning model to accurately forecast key performance indicators using the integrated data, achieving an impressive accuracy rate of 95%.
- Developed an intuitive interface for machine learning tasks, facilitating seamless integration for predictive analytics and ensuring a streamlined workflow.

ELT - Data Warehousing | Python, SQL, Airflow, Postgres, dbt, Docker, Redash

- Engineered a scalable data warehouse infrastructure to efficiently store and manage vehicle trajectory data sourced from CSV files, deploying a PostgreSQL database for robust data storage
- Leveraged dbt for seamless data transformation processes, ensuring data integrity and quality
- Utilized Airflow for effective data orchestration, automating and scheduling workflows for streamlined operations
- Presented comprehensive reports and visualizations using Redash for enhanced data analysis and decision-making capabilities

Technical Skills

Languages: PL/SQL, Python, Scala, Java, Java Script

Data Analysis Tools: SQL, Pandas, Spark, dbt, Looker, GCP (Cloud Function, Data Proc, GCS, Composer)

DBMS: Microsoft SQL Server, MySQL, Postgres, Oracle

Data Warehouses: Postgres, Microsoft SQL Server, Oracle, Snowflake, Google Bigquery, AWS Redshift

Data Storage Tools: Hadoop Distributed File System (HDFS), Google Cloud Storage (GCS), AWS S3

Reporting and Visualization Tools: Superset, Redash, PowerBI, Looker Studio

CRM Tool: Salesforce Marketing Cloud (SFMC)

Other DE Tools: Airflow, Kafka, Fivetran, Druid, Azure Data Factory, Docker

Scripting: Bash, Powershell, Unix shell scripting, JSON

MLOPs & CI/CD: GitHub and GitHub Actions, GitLab, DVC, MLOPs
